Four ways to embed images in your Jupyter notebook-powered blog

You can try out an interactive demo of the examples here: https://python-fiddle.com/saved/9IlLpKuCbBIA3Xz68UUo

1. Add images or screenshots as attachments to a notebook cell

If you want to quickly add a screenshot, you can simply paste it into a markdown cell. The notebook will create an attachment automatically and add a Markdown command to embed the screenshot. This approach works in the default Jupyter client or Jupyter Lab. I haven't been able to make it work in Visual Studio Code yet.

Alternatively, if you want to insert an image from a file, you can do that by first changing the cell type to Markdown and then clicking on Edit → Insert Image. Alternatively, you can simply drag and drop the image file into a Markdown cell.

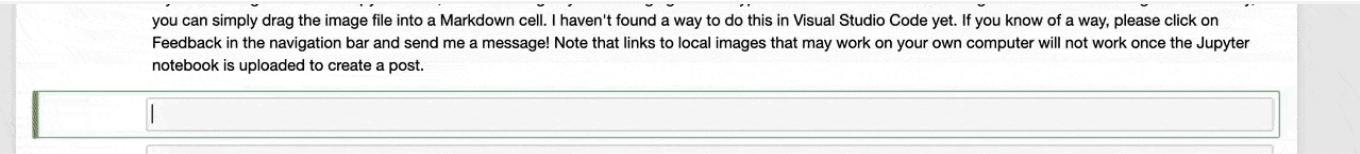
Medium Search Write M



2. Use Markdown to embed images from a URL

Use the following syntax to add images into Markdown cells.

```
![ALT_TEXT_FOR_SCREEN_READERS](IMAGE_URL)
```

For example, `![Waterfall](https://images.unsplash.com/photo-1593322962878-a4b73deb1e39?ixid=MXwxMjA3fDB8MHx0b3BpYy1mZWVkfDc3NHw2c01WalRMU2tlUXx8ZW58MHx8fA%3D%3D&ixlib=rb-1.2.1&auto=format&fit=crop&w=800&q=60)` will result in the following image:

3. Use the `img` tag in HTML to set width and height

Using the `img` tag allows us to specify the size and other style attributes for the image to be displayed.

```
<img src="https://images.unsplash.com/photo-1589652717406-1c69efaf1ff8?
ixlib=rb-
1.2.1&ixid=MXwxMjA3fDB8MHxwaG90by1wYWdlfHx8fGVufDB8fHw%3D&auto=format&fit=cr
op&w=1650&q=80" style="height:300px" />
```

4. Code

```
from IPython.display import Image
Image(url="https://images.unsplash.com/photo-1612815292258-
f4354f7f5c76?
ixid=MXwxMjA3fDB8MHx0b3BpYy1mZWVkfDYwM3w2c01WalRMU2tlUXx8ZW58MHx8fA%3
D%3D&ixlib=rb-1.2.1&auto=format&fit=crop&w=800&q=60", height=300)
```

The `IPython.display` module can also be used to embed a local file in the post without uploading it to cloud storage.

```
from IPython.display import Image
Image(filename="./IMG_0278.jpg")
```

If you'd like to embed an image as a URL instead, you can first upload the local file to a cloud storage service like Google Drive and obtain a URL by following instructions in this article: replnotes.com/guides/drive
